Because nobody can manage your money better than you.

CRNT Ceragon Networks Ltd (NASDAQ GM)

222% in Profit in 10 Months

CRNT had a **Market Watch Alert** issued in October of 2006 as it started rising from what was identified at the time as a possible head & shoulder base. The **Trigger Alert** price of \$5.75 was reached in January 2007. The **Take Off Alert** was reached in April 2007 @ \$7.00. We put in a **Sell Alert @ \$18.50** after more than a 200% rise in less than 6 months time, increased volume, and weakening technical's that are used to spot weakening trends. This allows the maximum use of time and money. When you get that much profit that quick it is usually better to take it and let somebody else stick around and be greedy. What tends to happen is you don't sell and you fool yourself into waiting for it to go up again which it never does and you hold it all the way back down.
