DCAI Dialysis Corp of America (NASDAQ GM)

1200% in Profit in 32 Months

In February 2001 I issued a **Market Watch Alert** for DCAI as it got very quiet on the volume and price fronts. The first bowl failed to do anything and often these formations have a second bowl that gets more discouraging but eventually breaks out. The **Trigger Alert** buy price of \$2.00 was reached in April 2002 forming the second bowl. The **Take Off Alert** of \$2.75 was hit the same month on a quick move up which met resistance at the top of the first bowl. DCAI settled into two consolidation periods of 20 months and another 9 months at a higher level before really taking off. Our **Sell Alert** of \$28.60 was based on higher volume but mostly on a surge from \$19.45 to over \$31.00 in three days time in early January 2005. The final selling price was determined by setting a stop loss @ 50% of the second days rise.
