

FPP Fieldpoint Petroleum Corp (NYSE-Alt)

424% in Profit in 2 Months

Here is one of those sharp drops followed by a quiet 45° downtrend that you have to be ready for the breakout and usually can expect about 100%-150% profit. A **Market Watch Alert** was issued in March 2007 for FPP as it had light volume and quiet price action for nearly a year. The **Trigger Alert** buy price of \$1.45 was breached in March 2008. It was established based on the downtrend line and previous high in the trend of \$1.38. The **Take Off Alert** of \$2.00 was hit the next month in April 2008. Our **Sell Alert** of \$ 7.60 was based on higher volume and a surge from \$2.28 to \$8.54 in only four days time. The last day was a gap up day and we set our stop at the 50% level of that day and we were stopped out the next day in May 2008.
