## GROW US Global Investors Inc (NASDAQ CM)

1103% in Profit in 21 Months

GROW had been basing by some charts all the way back to 1986 with only two moves near \$4.00. A scan of 52 week highs turned up this gem in April of 2004 and we immediately sent out a **Market Watch Alert** with a **Trigger Alert** buy price of \$2.50. The **Take Off Alert** of \$3.25 was not reached until February 2005 as GROW continued to consolidate. Our **Sell Alert** price of \$30.07 was based on the quick rise in November and December of 2006 using 50% of the difference between November's and December's high. When you look at the chart it does not take a genius to figure out that the trajectory of the rise (as well as the volume) has gone parabolic indicating it is time to be careful and protect profits. Only the greedy fail to act rationally and continue to think it will keep going higher. Then as it comes back down they keep saying they will sell if it gets back to a level they should have sold at before but it never does and they usually lose all they have gained and then some.
