## HDSN Hudson Technologies Inc (NASDAQ CM)

140% in Profit in 5 Months

We sent a **Market Watch Alert** in August 2007 to watch HDSN as it came slowly down off a spike drop in 2005 and was in a slow downtrend. Our **Trigger Alert** buy price was set @ \$1.25 and was hit in February 2008. It was a breakout of the extended down trend line that was modified after the price drop into the fall of 2007. The **Take Off Alert** of \$1.50 was reached the very next month in March of 2008. A Sell Alert was placed @ \$3.00 after the top in May failed to reach the previous top in late 2007 on higher volume. Like I have mentioned before I am not about to let 100% plus profit in 5 months turn into a loss or a long hold. If you don't trade another stock that year you have made 100% profit or better here. The problem is most people can't see the value in that and try and get greedy and wind up losing.
