JAH Jarden Corp (NYSE)

825% in Profit in 45 Months

A **Market Watch Alert** was issued for JAH in October 2001 after one year of lower basing action. There was strong support/resistance near \$4.00 from the previous 8 year base which if broken back through was a very positive sign of a large rise to follow. The **Trigger Alert** buy price of \$4.00 was hit several months later in January 2002. The **Take Off Alert** of \$5.00 was hit in March 2002. JAH followed a nice pattern of moving up and consolidating without any worrisome pullbacks; however, you can see how the angle of the uptrend changes as the price increases which is a sign that the public is being drawn in for the final slaughter. Our **Sell Alert** of \$ 37.50 was based on higher volume, weakening technical signals, broken trend lines, and previous trend resistance/support.
