## MOS Mosaic Co (NYSE)

560% in Profit in 19 Months

MOS never had a **Market Watch Alert**. It had a long basing pattern of 8 years before it finally reached its **Trigger Alert** price of \$18.00 in November 2006. We saw this stock right when it appeared ready to break out and called for an immediate buy if \$18.00 was broken which happened within two weeks of our **Trigger Alert**. The **Take Off Alert** came the very next month breaking other multi-year highs in December 2006. We put in a **Sell Alert** price that equaled 50% of the high and low for April 2008 which was \$118.78 where it was sold for a profit of 560% in 19 months. It wasn't the exact top but who cares it was a monster profit. We never worry about missed profit because it's just psychological nonsense. We rarely sell at the top and we can live with that.
