ONT On2 Technologies Inc (NYSE-Alt)

188% in Profit in 5 Months

I issued a **Market Watch Alert** for ONT in October 2006 because I liked the quiet price movement coupled with very quiet volume. The **Trigger Alert** buy price was set @ \$1.25 and was reached in January 2007. The **Take Off Alert** of \$1.50 was reached in March 2007. This stock moved up quickly on higher volume than the sharp rise in 2003 but did not come close to the price spike so we knew it was time to sell. Our **Sell Alert** of \$ 3.60 was placed 10% from the high which was hit twice within a couple days (\$3.98 & \$3.99) on very high volume and then could not hold. The nearly 200% price spike in the two months of April & May was an additional incentive for taking a profit.
