ORCT Orckit Communications Ltd (NASDAQ GM)

228% in Profit in 8 Months

We first saw ORCT after it had moved up into the consolidation level in 2004 and we sent a **Market Watch Alert** in September 2004. Had we saw it back in 2003 when it broke away from its base we would have made an entry near \$5.00 and would have been waiting over a year for the next rise. As it happened our **Trigger Alert** buy price was set @ \$8.25 and was hit in November 2004. The **Take Off Alert** of \$10.00 was reached in January of 2005. We have found over the years that the quickest profit come anywhere from 8 to 18 months after breaking out from the base or consolidation. It is unlikely for a stock to continue up without some sort of significant pull back. We look for technical weakness of divergence in price with MACD and RSI on weekly charts. This was the case and reason for our **Sell Alert @ \$27.10** in July 2006 after ORCT made a higher high @ \$29.55 but made lower strength signals with MACD & RSI.
