

TASR TASER International Inc (NASDAQ GS)

94.5% in Profit in 3 Months

TASR is a classic Ted Warren formation of a quick drop in prices followed by 2 to 3 years of a slow downtrend of less than 45° . The breaking of the downtrend and quiet volume signal the opportunity to buy. The **Trigger Alert** price of \$9.00 was reached in April 2007 with the breaking of the downtrend line. The quiet volume and pricing for the previous six months is a key signal. These trades are very accurate but generally only yield 100% or so because the bases are not long enough to warrant much more. We used the 50% target between the previous high of \$33.45 and low of \$5.31 for our target which was \$19.38. The actual high turned out to be \$19.36. When it crossed \$19.00 we put in a **Sell Alert** in July 2007 @ \$17.50 after more than a 100% rise in less than 3 months. If your unable to accept 100% in 3 months time then you're just greedy and simply unrealistic.
