UPFC United PanAm Financial Corp (NASDAQ GS)

960% in Profit in 52 Months

Our **Market Watch Alert** for UPFC was issued in November 2000 after two years of quiet basing action. There was strong support/resistance from the previous 2 years near \$2.50. That became our **Trigger Alert** buy price which was hit in May 2001. The **Take Off Alert** of \$3.50 was hit the next month in June 2001. UPFC then moved into a series of consolidations which usually signal higher prices and in early 2003 moved up quite nicely where profit probably should have been taken. In earlier years we were not as quick to take profits. The problem with upper consolidations is once you decide to stay you never know just how long they will last and your annualized profit tends to erode because time begins to work against you and the fresh amount of profit you can expect. These lessons were one of the primary reasons we developed the idea of selling earlier to maximize profits. Our **Sell Alert** of \$ 26.50 was based exclusively on protecting 50% of the move up out of the consolidation in 2005.
