## YZC Yanzhou Coal Mining Co Ltd (NYSE)

627% in Profit in 52 Months

My clients received a **Market Watch Alert** that included a **Trigger Alert** buy price of \$2.75 in February 2003. The **Trigger Alert** was activated in June 2003 signaling time to buy. The first **Take Off Alert** was issued at \$3.50 two months later in August 2003. Some clients sold early near \$6.00 of their own choosing in January 2004 but there was not enough of a price rise to warrant that but they were scared by the high volume. A three year consolidation ensued at which time I suggested buying more at an additional **Take Off Alert** was issued at \$10.00 which signaled a breakout of the consolidation. A **Sell Alert** was given in October 2007 when technical signals and much heavier volume suggested weakening of the steep rise. A maximum profit of 627% could have been made in 52 months.
