

ZYXI Zynex Inc (OTC BB)

242% in Profit in 6 Months

We recommended a **Market Watch Alert** on ZYXI in November of 2007 with a **Trigger Alert** entry price of \$1.60 which was reached in February 2008. Our **Take Off Alert** price of \$2.00 was hit in July 2008. Once we went over 200% profit in less than 2 months we did our usual math and put in a **Sell Alert @ \$5.47**. The price was calculated on 50% of the price difference between the 200% profit level of \$4.80 and the high of \$6.14 that was reached 2 days after hitting the 200% profit mark. Such a large profit in a small period of time is unlikely and we know that. We have walked away with excellent profits due to our emotional discipline. We have missed out on some bigger profits but we know that 9 out of 10 times our decision to sell has been the right one.
